

FOR IMMEDIATE RELEASE

Announcement of Share Transfer of Hitachi Automotive Systems Subsidiary to Hitachi Transport System

Tokyo, June 27, 2019 – Hitachi Transport System, Ltd. and Hitachi Automotive Systems, Ltd. today announced that they have concluded a share transfer agreement to transfer 70% of shares issued by PALENET CO., LTD. a consolidated subsidiary of Hitachi Automotive Systems. PALENET engages in the development, sales and rental business of cargo handling materials (pallets).

Hitachi Transport System Group will acquire the shares as an opportunity to secure further growth, in line with its mid-term management plan, “LOGISTEED2021”.

The transaction will further accelerate the reorganization of Hitachi Automotive Systems’ business portfolio, by enabling further focus and strengthening of core businesses, such as powertrain, chassis and safety systems.

PALENET’s operations focus on the rental of plastic cargo pallets. The users of the company’s pallet rental services are manufacturers, whose demand in pallets fluctuates, depending on production volume. Their use of pallet rental services has been increasing for its convenience and flexibility to allow the use of pallets efficiently. PALENET unique pallet rental system differentiate the company from its competitors. Specifically, in the supply chain of manufacturing industries, where products are transferred from a Tier2 or below to Tier 1 and then to final assembly lines, PALENET provides RRS (Pallet Rental Relay System), which allows users to relay and circulate pallets in the supply chain. This approach saves manufacturers from returning pallets as they would normally do, supporting an efficient production logistics system. As a result, the company’s business scale is projected to expand.

In today’s logistics industry, service providers are required to improve efficiency through total optimization, and offer integrated solutions for the total supply chain, from procurement, production, sales, logistics to after services. In such a business environment, it is necessary for logistics companies to develop strategies aimed at offering total logistics services to enable sustainable growth, through collaboration with partners with competitive operation support systems and advanced information systems.

Hitachi Automotive Systems and PALENET discussed the growth strategy of pallets rental business and agreed that PALENET would be better positioned to continue its growth under Hitachi Transport System, which has not only accumulated deep knowledge of the logistics business and consulting capabilities, but also broad logistics infrastructure and optimum logistics solutions to customers. With this move, PALENET would be able to access the resources and customer base of Hitachi Transport System and target further growth. Hitachi Transport System will also benefit from PALENET’s strengths, such as its unique relay type pallets rental system. This will allow it to strengthen its transport digital platform by establishing shared services, including supply management of logistics equipment, and combining with vehicle motion control in SSCV* to visualize the supply chain.
